AFCIN-4E1

SUBJECT: (U) Proposed MTI Circuitry

TO : Commander
Rome Air Development Center
Griffiss Air Force Base, New York

1. The attached letter which includes proposed foreign MTI circuitry has been received by ATIC for evaluation. An incomplete analysis by this office indicates circuitry is most probably limited to coherent type radar systems. Your comments are requested as to the following.

- a. Feasibility or soundness of techniques and circuitry described
- b. Are similar techniques employed by known USAF contractors?
- c. Are any features of the proposed system new and patentable?
- d. Are proposed techniques suitable for airborne radar application? (SECRET)

2. Information regarding point a, above, is considered particularly important because source indicated he has further ideas for improving this system if the original circuitry is workable. (CONFIDENTIAL)
